DRAINTALENT.COM

Your Sports Partner

**Every athlete wants to play on an excellent surface.
We, therefore, are passionately committed to the
relentless pursuit of better sports fields.**

DrainTalent fields create the optimal level of moisture and are more vital, more stable and more durable, all while reducing water and energy consumption. Because this and every generation need sports, we partner with sports teams in our commitment to a healthy planet...and a beautiful field.

DrainTalent: partnering with teams and communities that want to create sustainable, strong, and superior natural fields.

What is DrainTalent?

There is nothing better than the smell of fresh cut grass when you're playing sports. A perfect green surface where the ball rolls like it should and tackles and slide tackles don't mean injuries. Where the surface isn't too wet or too dry; in fact, it's just right.

With constantly changing weather conditions-and heavier rains, frequent drought, and stop and go seasonal change, this just wasn't possible...until DrainTalent.

DrainTalent is a unique circular soil management system which creates optimal growing conditions that perfectly balance moisture and air. The result: beautiful fields, fewer cancellations, and higher performance. This fully circular system offers vast advantages in sustainability, all while reducing the stress and work of the maintenance team.

And it's incredible to play on.

Benefits

Extracting water at high speed

DrainTalent rapidly extracts water from the top layer of any sports field. Your grass is instantly dry and ready for play.

Infiltrating water

When watered at the root level, your grass is healthier, less vulnerable to disease and quickly recovers after the wear and tear of play.

Reusing water

You can collect extracted water and infiltrate it again, on demand, as DrainTalent is a completely circular system with minimal water consumption.

Simple

By using the "automated function", your maintenance team will worry less because DrainTalent is always working, keeping the field in optimal condition 24 hours a day, 7 days a week, no matter what Mother Nature has planned.

Durable and Circular

Water scarcity is a major threat to our world. With DrainTalent, water is efficiently used, realizing minimal waste- it's a big step forward in the greening of the sports world.

Using our expertise in technology, soil, grass and field sports, the DrainTalent team has created a product that not only improves sport, but also our planet.

DrainTalent uses up to 60% less water compared to traditional irrigation and, when combined with a water reservoir, the system becomes fully circular assuring that you never lose a drop.

Ask us how we can help your team or community move sports forward.

1. Greater playability

Because your field would be continuously kept at an optimal level, we create a stronger and healthier turf. This results in more time to play, with up to 600 play hours possible on a DrainTalent field.

1

2. Value

We can even connect two sports fields to the same DrainTalent system, increasing the efficiency and value of your investment.

2

3. More air in the top layer

With DrainTalent, you can also press air through the drainage pipes aerates the top layer of the field. And while extracting water, you can create space for air in the porous volume of your bottom profile, moving the process from anaerobic to aerobic.

3

4. Operate via display or the app

DrainTalent can be operated both on the unit display at the field or, via the app, from anywhere
